

Reactive silicone Tech-2162

Description

Tech-2162 is hydroxyalkyl-terminated silicone compound that has high reactive terminated functional group – CH₂OH. Its reactivity is higher than the Si-OH as the reaction functional group. Through by the work with isocyanate, the Tech-2162 can bring organic silicon into the polyurethane materials so as to improve the flexibility, water resistance, smooth, weather resistance and so on the characters.

Physics and Chemical properties

Ingredient: Copolymer of Hydroxyalkyl-terminated Polysiloxane and Polyether

Appearance: Light yellow transparent liquid

Molecular weight: 2000

Content: 100%

Application System and Dosage

Tech-2162 could be used in any cross-linking system that is reacted via hydroxyl group such as polyurethane, amino systems and so on.

The amount is around 0.1-10% of total in terms of different application

Package

25kg metal pail

TECH Polymer

A company focus on additives since its birth
