

Substrate wetting agent Tech-245

Description

Tech-245 is polyether modified organic silicon compound. It can greatly decrease the system surface tension and provide the strength wetting ability and without any influence on the recoat ability.

Physics and Chemical properties

Ingredient : Polyether Modified Silicone

Appearance: Light yellow transparent liquid

Content : 100%

Specialty

Leveling	Wetting	Recoat Ability	Compatibility	Sliding	Low Foaming Stability	Anti-crater	Anti-adhesive
★★★★★	★★★★★	★★★★★	★★★★★	★	★★★	★★★★★	★

Application System and Dosage

It's suitable for the water-wood-paint, industry water-borne coatings and UV-curable coatings, printing ink systems.

The amount is in terms of the different application system, around 0.1-1% of total in common. Tech-245 can be put in during any step of manufacture.

Package

25kg metal pail.
