

## Reactive silicone **Tech-2420**

### Description

Tech-2420 is modified silicone compound that has high reactive terminated functional group—CH<sub>2</sub>NH<sub>2</sub>. Through by its reaction, the Tech-2420 can bring organic silicon into the materials so as to improve the flexibility, water resistance, smooth, weather resistance and so on the characters. Meanwhile, Tech-2420 can create the permanent low surface tension layout on the paint film surface.

### Physics and Chemical properties

**Ingredient** : Amine-terminated polysiloxane (Mn≈2000)

**Appearance**: Light yellow transparent liquid

**Content** : 100%

### Application System and Dosage

The amount is 0.2-1% for persistent slip, 2-6% for anti-dirt. Tech-2420 can be introduced in any step during manufacture.

### Package

25kg metal pail.
