

Reactive silicone **Tech-2440**

Description

Tech-2440 is modified silicone compound that has high reactive terminated functional group—CH₂NH₂. Through by its reaction, the Tech-2440 can bring organic silicon into the materials so as to improve the flexibility, water resistance, smooth, weather resistance and so on the characters. Meanwhile, Tech-2440 can create the permanent low surface tension layout on the paint film surface.

Physics and Chemical properties

Ingredient : Amine-terminated polysiloxane (Mn≈4000)

Appearance: Light yellow transparent liquid

Content : 100%

Application System and Dosage

The amount is 0.2-1% for persistent slip, 2-6% for anti-dirt. Tech-2420 can be introduced in any step during manufacture.

Package

25kg metal pail.
